Agriculture-industry linkages in india: evidences and some issues

Dilip Saikia Research Scholar, Institution for Financial Management and Research

Abstract

The structural changes in sectoral composition and uneven pattern of growth of agriculture, industry and services sectors of India's economy in the post-reform period, coupled with the recent spate of services-led growth is likely to cause substantial changes in the inter-sectoral linkages. In this light the present book explored the inter-sectoral linkages in India before and after reforms. In doing so, we have made a critical evaluation of various theoretical and measurement issues underlying the inter-sectoral linkages in the Indian context. The we also explored the services-led growth of India's economy in the port-reform period and discussed the measurement debate relation to measuring services output and value added.
